

DESCRIPTION

RUST SHIELD is a special labor-saving formulation designed to replace costly, labor intensive rust removal procedures. The simple one-step, no rinse process completely protects metal surfaces. **RUST SHIELD** is ideal for use on most metal surfaces; testing for sensitivity on a small area is recommended.

DIRECTIONS

Paint On Method:

Use **RUST SHIELD** full strength or in dilution up to one (1) part **RUST SHIELD** to three (3) parts water. Remove heavy or flaky rust with wire brush or scraper. Apply freely to surface using brush, cloth or roller. Cover all parts. Allow parts or surfaces to air dry without rinsing. Treated area may be painted immediately after drying if desired.

Soak Tank Method:

Use **RUST SHIELD** full strength or in dilution up to one (1) part **RUST SHIELD** to three (3) parts water. Submerge parts to be cleaned and allow to soak for one hour or longer, depending on the condition of the metal. Do not soak parts longer than necessary to clean metal. Moderate agitation is not essential but may be helpful in some cases. Remove parts and drain. Allow to air dry without rinsing. Solution may be reused if proper strength is maintained.
